DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-10, drawn to a magnetic stirring apparatus, classified in class 366, subclass 273.

II. Claims 11-18, drawn to a method of stirring a solid suspended in liquid, classified in class 366, subclass 348.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In the instant case, while the method is limited to "stirring a solid suspended in a liquid", the apparatus could be used to stir other types of material such as a liquid alone. While the apparatus claim includes the words "stirring a solid suspended in a liquid", as held in *Ex parte Thibault*, 164 USPQ 666,667 (Bd. App. 1969), "Expressions relating the apparatus to contends thereof during an intended operation are of no significance in determining patentability of the apparatus claim". Furthermore, the method requires a stirrer, while the apparatus does not (although a stirrer is mentioned with regard to an intended use of the apparatus being claimed). The apparatus could be used without the stirrer, as is common in molten metal stirring, by direct action of the magnetic field on the sample. Also, the method could be practiced by holding the

vessel by hand, instead of by using the "vessel holder" required by the apparatus claims. Also, the method could be practiced by moving the magnet by hand, instead of by using the "magnet driver" required by the apparatus claims.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. An attempt to reach Bruce S. Weintraub was made during the week of 12/2/2002 to request an oral election to the above restriction requirement, but a recorded message indicated that he would be out of the office until 12/9/2002. Another attempt was made to during the week of 12/9/2002, but a new message said Mr. Weintraub would be out of the office until 12/16/2002.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
